In econometrics, a structural break, or structural change, is an unexpected shift in a time series that can lead to huge forecasting errors and unreliability of the model in general. This issue was popularised by David Hendry, who argued that lack of stability of coefficients frequently caused forecast failure, and therefore we must routinely test for structural stability.

In the context of software engineering, software quality refers to two related but distinct notions that exist wherever quality is defined in a business context: . Software functional quality reflects how well it complies with or conforms to a given design, based on functional requirements or specifications. That attribute can also be described as the fitness for purpose of a piece of software ...

Results. The principal component analysis confirmed the presence of a two-component factor structure in the English version and a three-component factor structure in the French version with eigenvalues  $> 1$ . The English version of the ISI had an excellent internal consistency ( $\hat{I}_{\pm} = 0.90$ ), while the French version had a good internal consistency ( $\hat{I}_{\pm} = 0.70$ ).

I am Me. In all the world, there is no one else exactly like me. Everything that comes out of me is authentically mine, because I alone chose it -- I own everything about me: my body, my feelings, my mouth, my voice, all my actions, whether they be to others or myself.
